

CHOLERA ALERT !!!

WHAT IS CHOLERA?

Cholera is a diarrhoeal disease caused by a bacteria called *Vibrio Cholerae*. The bacteria infects our intestine and causes severe diarrhoea and dehydration.

CHOLERA SYMPTOMS:

Illness and Symptoms:

- profuse watery diarrhoea
- vomiting.
- thirst.
- leg cramps.
- restlessness or irritability.

HOW DO YOU GET CHOLERA?

- Cholera can be contracted by drinking water or eating food containing the cholera bacteria.
- Bacteria can spread from an infected person if they handle food without washing their hands first or relieve themselves into a water source.
- Hand hygiene and food safety is therefore very important in preventing the spread of cholera.

OUR SOLUTIONS: WATER TESTING & ANALYSIS

- Water sampling for microbiology & chemical analysis.
- Lovibond water testing equipment & reagents

DISINFECTION & SANITATION

- HTH chlorine & Aquatabs for potable water treatment
- Inline dosing systems & reservoir floaters

FILTRATION & PURIFICATION

- Pentair "Point of Entry Sediment & Activated Carbon Filters"
- & Reverse Osmosis & Ultrafiltration purification systems

SAFE DRINKING WATER

- Owell filters for municipal water filtration
- Safe purified bottled water
